

New Components, Greater Control

Enhance functionality in commercial spaces with three new solutions for the ARISTA® Advanced Lighting Control System. Our new Programmable Switches and Phase Dimming Controller offer occupants hands-on control and help installers create a customized indoor lighting experience.

Dynamic Lighting Control with the Push of a Button

New ALC-2B-BT (2-button) and ALC-4B-BT (4-button) Programmable Switches allow occupants to adjust brightness levels and select lighting scenes with the push of a button. Both switches offer a battery-powered option and can be mounted anywhere.

Built to Shine in Any Situation

Ensure compatibility and performance with new ALC1-P Phase Dimming Controllers. Designed to work with phase dimming fixtures, such as sconces and track lighting, the devices provide additional options when customizing ARISTA systems to meet project needs.

Designed for Spaces Big and Small

- Hospitals
- Retail stores
- Commercial facilities
- Offices
- Government buildings
- **Schools**

Example: This large classroom highlights how an ALC4-R 4-Channel Controller can be used with an ALC-4B-BT Programmable Switch to let teachers quickly switch between lighting scenes for various in-class activities.

Always on Time

Every ARISTA room controller, including the ALC1-P, ALC1-R, ALC2-R, and ALC4-R features an integrated real-time clock (RTC) chip for keeping timing accuracy. This provides a superior level of timing accuracy and ensures schedules stay aligned across devices. In the unlikely event that a sensor or programmable switch fails, communication between the remaining devices makes sure that all time schedules remain in sync.

Building the Future with ARISTA

Use our growing portfolio of contractor-friendly ARISTA solutions to create dynamic lighting environments without the hassle of a gateway or smart hub.
